

## Timisoara - Motivation letter for this activity

Dear OrgaNICErs!

One day I caught a wild duck with my bare hands to pet her. She was a happy duck because she got some bread. Now you know my superpower and my knightly spirit, so I will introduce myself.

My name is Andreas Seifert (Andreas Se — on Facebook) and I'm from beautiful big Vienna, Austria. There I'm studying mechanical engineering at the technical university.

Beside my studies I am working part-time as mechanical designer using Autodesk Inventor.

In my free time I like to go mountain biking, playing guitar and sing.

Always up for new adventures and meeting awesome people I would like to visit you in Timisoara.

As you maybe can guess, the title of your course immediately jumped into my eye. No worry — it's just an Austrian phrase translated directly to English.

Before i even looked where the course is happening I knew that I will apply, because it's the most interesting topic of all courses for me. It would be a pleasure for me to learn from you more about CATIA because it's always good to see the possibilities of other software. During High School I got just a little bit in contact with it.

But I don't just want to learn about CATIA and 3D printing. I honestly don't know much about Romania and after reading the survival guide of your course I definitely want to know more about your country and you and I'm excited to go there. The colourful architecture of Timisoara looks stunning and a little bit familiar to me.

Still not persuaded? Timisoara is called little Vienna and I am from Vienna. Coincidence? I think not! So, say yes to my Application and let us enjoy sarmale together.

If I convinced you that I am the right person for your course, my work is done and I'm looking forward to start my journey from Vienna to little Vienna.

Best Wishes, Andy
